

Sweet Peas

How to Plant Sweet Peas

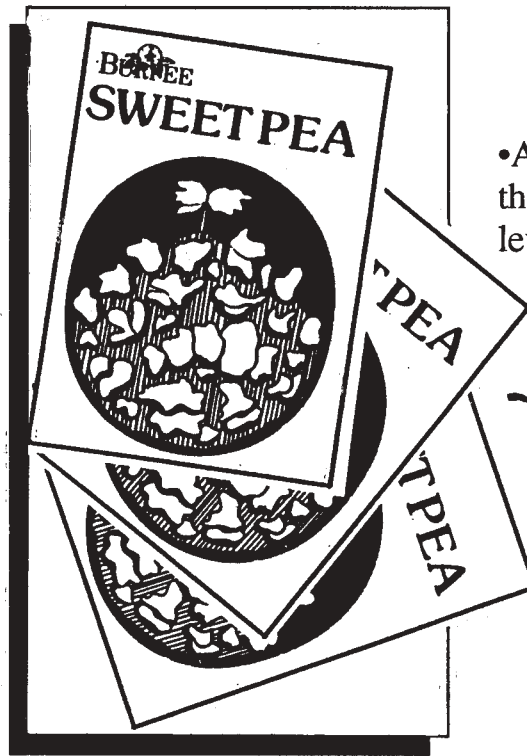

- Dig a trench 10 to 12 inches deep mixing Dolomite into soil on bottom of trench

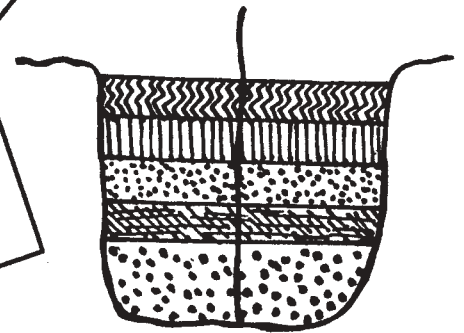

- Soak the seeds until they puff (about 2 hours)

- Inoculate seeds following the directions on the package

- Plant seeds in trench

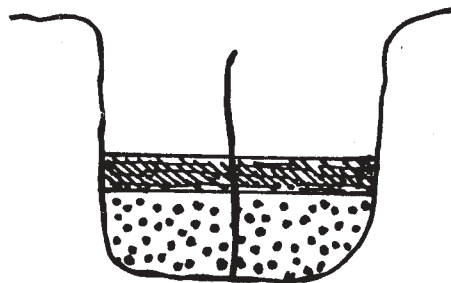

- As plant grows, fill trench half the height of the plant until level with surface

- When plant is 4 to 6 inches tall, fill 2 inches in trench

- This method will encourage deep rooting and will keep sweet pea plants short through winter. They will then shoot up in the spring with beautiful blooms.
